

Seaport Validator Development Access

To access Ledger API for deployment DAR, create contract, query ACS, fetch ledger update etc you will need to access Ledger API.

Ledger REST endpoint

<https://ledger-api.validator.devnet.sandbox.fivenorth.io/>

Ledger WebSocket endpoint

<wss://ledger-api.validator.devnet.sandbox.fivenorth.io>

Auth Token

To access Ledger API, you need an JWT token. The token can be exchange by providing OIDC client id/secret as below

- Client ID: **validator-devnet-m2m**
- Client Secret:
r69FQmevLRwEgMB8NnKaSDHPewTOSx7Yy5jucsqAlmsAaJc3DIggedCz4tyyonl4W2WoOVzkUIjy8dHTlc16AOJQzx02QzJyIAUG56oLTCoVCJUUK40vRv9CqQEY3fjn

Now with the above, you can exchange it for an access token. You can make this request

```
curl -X POST 'https://auth.sandbox.fivenorth.io/application/o/token/' \
  --header 'Content-Type: application/x-www-form-urlencoded' \
  --data 'grant_type=client_credentials' \
  --data 'client_id=validator-devnet-m2m' \
  --data
'client_secret=r69FQmevLRwEgMB8NnKaSDHPewTOSx7Yy5jucsqAlmsAaJc3DIg
gedCz4tyyonl4W2WoOVzkUIjy8dHTlc16AOJQzx02QzJyIAUG56oLTCoVCJUUK40v
Rv9CqQEY3fjn' \
  --data 'audience=validator-devnet-m2m' \
  --data 'scope=daml_ledger_api'
```

You will then get an `access_token` in the response. This access token expires every 8 hours, so code your app in a way to detect and refresh this.

Access Ledger API

Http Rest API

`https://ledger-api.validator.devnet.sandbox.fivenorth.io/`

Then now you can make request to ledger and passing the access token as Bearer

Example to access Ledger End

```
curl -X GET 'https://ledger-api.validator.devnet.sandbox.fivenorth.io/v2/state/ledger-end' \
  --header 'Authorization: Bearer <token>'
```

Websocket API

You can re-use same URL endpoint, using the same access token but with this format

```
wscat -w -1 --connect
'wss://ledger-api.validator.devnet.sandbox.fivenorth.io/v2/state/active-contracts' -s
'jwt.token.<token>' -s 'daml.ws.auth'
```

You can adapt to any websocket library. The ``-s`` is the subprotocol of websocket. When coding, make sure the ordering is correct
